

High precision surface finishing solutions for reliable, consistent results. Edge-Breaking – Deburring – Smoothing – Polishing – Cleaning

As a full service provider for surface finishing Spaleck Oberflächentechnik is a leading manufacturer of machine and process technology for the efficient finishing of metals and other engineering materials.

Rising demands of customers concerning surface quality and cleanliness require a continuous development of machine technology. Space-saving construction, rising throughput and a high automation degree in connection with an integrated part logistic functionality are key elements of that development.

Spaleck Oberflächentechnik has focused its surface finishing solutions on specific chain industry requirements and can provide different solutions to enhance the quality of industrial chain products. Fully automatic centrifugal as well as vibratory finishing installations can be integrated in existing production environments. The process technology with especially developed process media for chain treatment plays the decisive role in our unique treatment know-how. So Spaleck Oberflächentechnik is able to push chain quality and lifetime to a new competitive level.
