Simple and Effective: Nothing More Than Hot Air

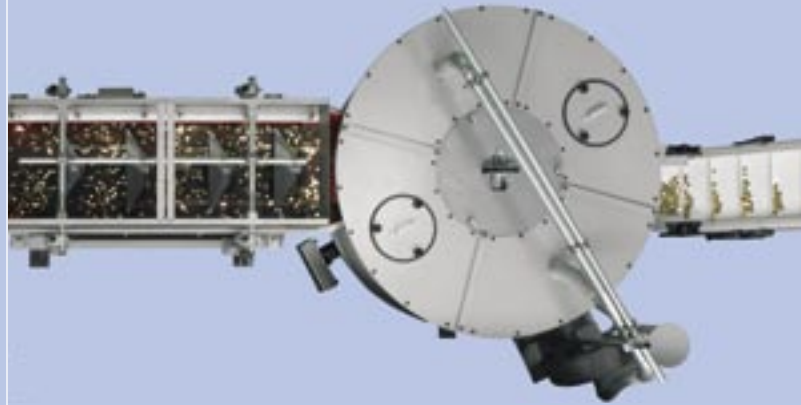

SPALECK technology is used world wide for deburring, drying and polishing of blanks of all types and sizes. Our systems are custom-designed for each application, based on our experience and your requirements.

Drying after plating

The SPALECK combination of rinsing, air knife application technology and hot air drying guarantees spot-free clean dried blanks.

The advantages of SPALECK process:

- ◆ uniform results
- ◆ continuous or batch production
- ◆ dried blanks after plating will reduce acid consumption in final burnishing process
- ◆ a dust free alternative to corn cob drying
