**The usage of water is
necessary for outstanding
surface finishing results.
Nevertheless, it should
only be borrowed and given
back to nature in its
original clean condition**

Let us share our experience to use water as a valuable resource

The water is a necessary part of the surface finishing of coin blanks. It is needed to treat the blanks and to prepare them for easy and reliable striking.

The Spaleck waste water recycling and treatment systems return the processed water back to nature, clean and free of residue.

The recycling systems offer to use the water in a permanent recycling condition to achieve minimum usage of water and chemicals for a most economical surface finishing treatment.

Efficiency

- ◆ up to 95% reduced water consumption
- ◆ greatly reduced waste water disposal costs
- ◆ up to 95% compound savings
- ◆ reduced costs for sludge disposal by minimized sludge volume

*Evaporator for total
water recycling*
